

DECIBULLZ[®]

CUSTOM MOLDED WIRELESS EARPHONES

DECIBULLZ WIRELESS

Decibullz are a custom-molded earphone system. Unlike traditional earphones, Decibullz are easily and quickly molded by the user to the exact shape of their ears. This creates a perfect fitting earphone that will never hurt and never fall out. Because Decibullz are custom fit to the unique shape of the user's ear, they are more secure, more comfortable, and provide better noise isolation than traditional earphones.

Molding Decibullz is extremely easy. Simply heat the Decibullz thermoplastic molds in hot water and shape them to your ears. That's it! Decibullz are also the only re-moldable custom earpieces! So if you don't get the perfect fit the first time, simply re-shape them until you get the perfect fit.

THE PROBLEM

Wireless Earphones are notorious for falling out and becoming uncomfortable. The increased size and weight added by the battery and wireless components simply can't be held in by traditional silicone ear tips. Custom-molded earphones are more secure, provide better isolation, and are more comfortable. However, traditional custom molded earphones are extremely expensive and require a trip to the audiologist.

THE SOLUTION

We created a custom-molded earphone system that will assure your earphones fit perfectly and provide maximum protection.

Decibullz use a custom mold in the outer ear to keep the canal tip from pushing out. The custom mold also keeps the earphones perfectly aligned in the ear canal providing maximum comfort and isolation.

Decibullz Wireless Earphones are perfect for running, workouts, travel, and using your mobile device.

WHAT'S INCLUDED

Decibullz thermoplastic molds easily form to the unique shape of your outer ear. They can also be re-molded as many times as necessary to achieve the perfect fit.

Decibullz Wireless Earphones featuring AptX® technology for high-quality wireless audio.

Small, medium, and large specially designed silicone tips provide a comfortable noise-isolating seal.

Custom Cable Clip allows for adjustable cable lengths.

Carrying Case to protect earphones when not in use.

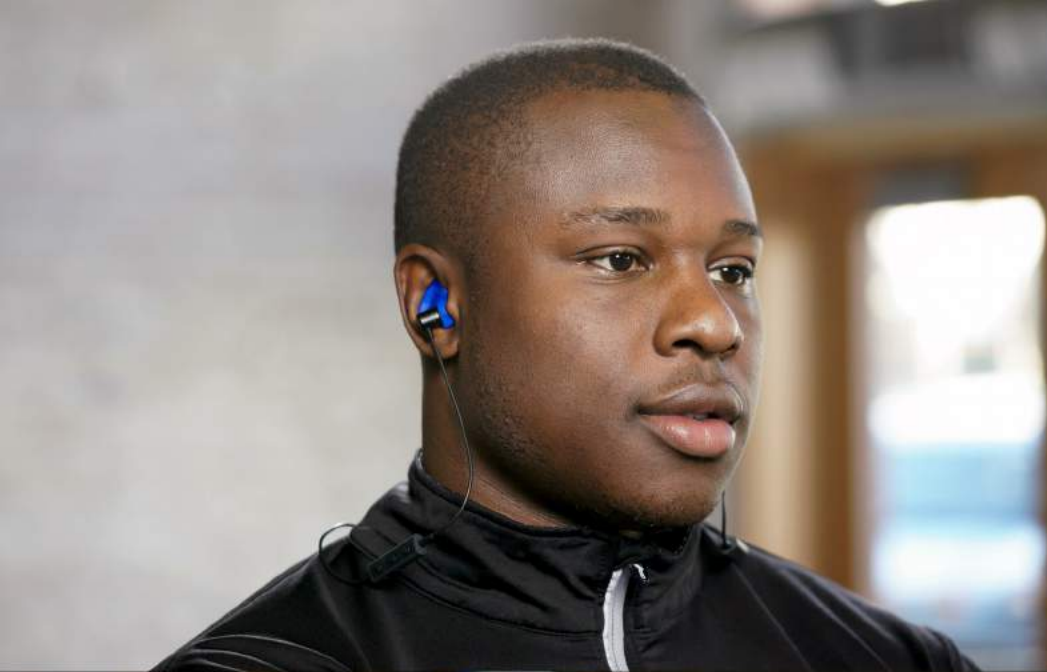

THE FOUNDER

Kyle Kirkpatrick is an elite gymnastics coach, extreme athlete, and avid mobile device user. But he was fed up with headphones because they wouldn't stay in during workouts.

He found the only way to create earpieces that fit well is to mold them to the exact shape of the ear. Kyle wanted to create a product that was easy and affordable, unlike current custom earpieces.

After years of experimenting, Kyle developed the first re-moldable custom molded-earphone. He soon discovered that his invention could be used for much more and began developing earplugs, hearing aids, and other earpieces.
